

1. Authentication & Onboarding

- **Access:** Users visit the site. If they are not authenticated or their session has expired, they land on the Login page.
- **Login Methods:** Users log in using Email/Password or "Continue with Google".
- **Edge Cases & Recovery:**
 - Includes a self-serve "Forgot Password" flow.
 - If a user tries Google SSO before an account is provisioned for them, they see a clear error: "Account not found. Please contact your administrator."
- **Author Onboarding:** Rather than handing out manual passwords, the system sends an automated invite email to new Authors (triggered by the SuperAdmin) with a secure link to set their initial password.
- **Role Routing:** Upon successful login, the system routes the user based on their role: **Author** or **SuperAdmin**.

2. Author Dashboard & Book Management

- **Dashboard View:** Authors see a centralized list of all their books.
- **State Indicators:** Every book displays a clear visual badge denoting its status (Draft, Published, or Unpublished Changes).
- **Book Actions:** Authors can create new books, edit existing ones, or archive/delete them (utilizing a "soft delete" so mistakes can be restored).

3. Content Creation & Hierarchy (Book → Chapter → Content)

- **Drafting:** The Author creates a Book, adds Chapters under it, and adds Content under those chapters (Text-based, Image-based, and Audio).
- **Reordering:** A drag-and-drop interface allows Authors to easily reorder chapters and content blocks without manually typing sequence numbers.
- **Media Guidance & Context:** Before the upload zone, the UI provides comprehensive guidance:
 - Maximum file size limits.
 - Text guides on how to compress media.
 - Recommended compression tools (with direct links).

- Embedded YouTube tutorials for visual learners.
 - *The "Why"*: Explicitly explaining that compression is vital for readers with poor internet connections.
- **Upload Experience:** The upload UI includes visible progress bars, error messages, and auto-resume capabilities if the Author's internet drops during a large audio upload.
- **Autosave Feedback:** The system continuously saves all progress as a draft, displaying a subtle visual confirmation (e.g., "Saving..." → "Saved just now") so the Author knows their work is secure.

4. Review & Publishing

- **Live Preview:** Authors can toggle a "Preview" mode to see exactly how the content, images, and audio will render for the end-user.
- **Pre-Publish Validation:** When the Author clicks "Publish," the system runs a quick check and flags empty chapters or missing media before pushing the book live.
- **Editing Live Books:** If an Author edits a previously published book, the system creates a background draft. The live version remains unchanged until the Author clicks "Republish."

5. SuperAdmin Capabilities

- **Account Management:** SuperAdmins are responsible for creating Author accounts, sending invites, and suspending or deleting accounts.
- **Global Content Management:** SuperAdmins can view and manage every book on the platform.
- **Moderation Override:** SuperAdmins have a one-click "Unpublish" button to quickly pull down any broken or inappropriate content.
- **Troubleshooting (Impersonation):** SuperAdmins can click "Log in as [Author]" to see the exact dashboard and errors that an Author is experiencing to help them resolve issues.
